Vessel info:

Ship Type:	Research vessel
Class:	DNV
Navigation Area:	Small coastal trade

General ship data:

Length overall	Loa	36.25	[m]
Length between perpendiculars	Lpp	33.90	[m]
Breadth (moulded)	B	9.60	[m]
Depth to freeboard deck	D	4.29	[m]
Draught design (summer)	Ts	2.90	[m]

IMO, International Convention on Tonnage Measurement of Ships 1969, Annex 1

Total volume of the ship (incl. hopper)	V	=	1627	[m ³]	
Volume of the cargospace (hopper)	V _c	=	42	[m ³]	
Moulded depth	D	=	4.29	[m]	
Moulded draught	d	=	2.90	[m]	
Number of passengers in cabins < 8 berths	N ₁	=	0	[-]	
Number of other passengers	N ₂	=	0	[-]	
If N ₁ +N ₂ < 13, then N ₁ =N ₂ =0					
K ₁ = 0.2 + 0.02*log ¹⁰ (V)	K ₁	=	0.26	[-]	
K ₂ = 0.2 + 0.02*log ¹⁰ (V _c)	K ₂	=	0.23	[-]	
K ₃ = 1.25*(GT+10000)/10000	K ₃	=	1.30	[-]	
Not to be taken greater than unity	$\frac{((4*d)/(3*D))^2}{K_2*V_c*((4*d)/(3*D))^2}$		=	0.814	[-]
Not to be taken less than 0.25*GT	$K_2*V_c*((4*d)/(3*D))^2$		=	107	[-]

Results:

Gross tonnage	GT = K ₁ * V	GT	=	430	[tonnes]
Net tonnage	NT = K ₂ * V _c * $\left(\frac{(4*d)}{(3*D)}\right)^2$ + K ₃ * (N ₁ + (N ₂ /10))	NT	=	129	[tonnes]
Shall not be taken as less than 0,30*GT
